PROBLEM STATEMENT

HEALTHCARE:- SECURE HIPAA-Compliant Medical Record Exchange Platform

Many patients send medical reports through email or chat apps but those aren't safe. Sensitive health data can be leaked, stolen, or shared with the wrong person.

There's no simple way to track who accessed a file or to make sure only the right people see it.
So, we don't have an easy, secure, and private way to share medical documents online.

PROPOSED SOLUTION

The HealthTalk platform is a modern web application developed with the aim of bridging the gap between patients and healthcare professionals through a secure, privacy-oriented environment. It provides:-

Solution 01

The safe exchange of medical records between patient and doctor

SOLUTION 02

Secure user authentication

Solution 03

Allowing registered users to access personalized healthcare services

Solution 04

Use location for searching near by doctors and clinic

FEATURES

MAINTAINING USER FEEDBACK

Collecting patient and doctor feedback to continuously improve the platform's features and user experience.

SEARCHING NEAR BY DOCTOR

By using map user can find the near by doctors and clinic

CHATBOT

Tell about the available feature about website and related question regarding health-care

APPOINTMENT SCHEDULING

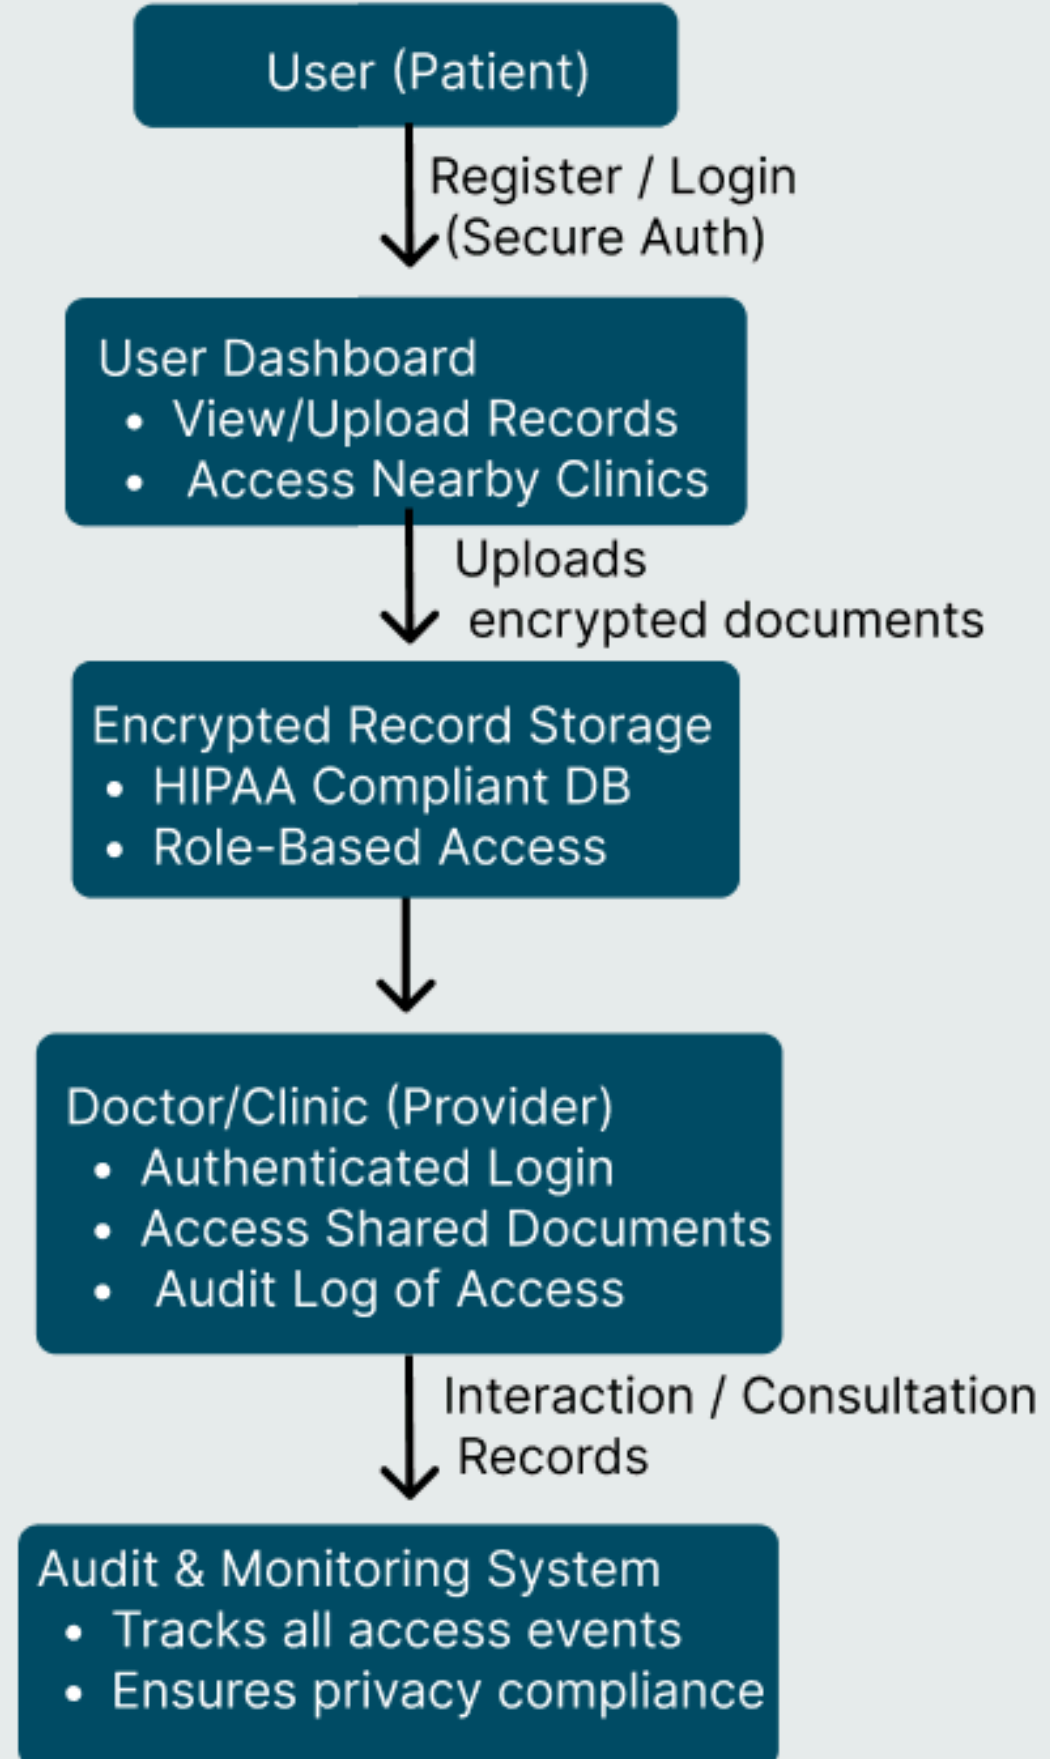

Allows patients to book, cancel, or reschedule appointments with their healthcare providers directly through the platform.

RECOMMENDATION OF BEST DOCTOR:-

Suggesting the most suitable healthcare providers based on patient ratings, specialties, and location to ensure optimal care

WORKFLOW

WORKFLOW

- HealthTalk ensures secure communication between patients and healthcare providers.
- Patients can register, upload encrypted medical records, and find nearby clinics.

How our solution is different?

How Our solution is different?

Feature	Our Solution	Other Solutions
Encryption	End-to-end (client-side)	Transit/rest only
HIPAA Compliance	Fully compliant	Partial or unclear
Access Control	Role-based (RBAC)	Basic or limited
Patient Control	Patient grants/revokes access	Provider-controlled
Audit Logging	Detailed, real-time logs	Basic or missing
UI/UX	Modern, responsive	Outdated interfaces
Sharing Method	Encrypted links, key-based	Email or unsecured portals

Technology used:

FRONTEND

- React .js
- tailwind css
- maplibre
- chakra ui

BACKEND

- node.js, express.js
- database- mongodb
- authentication
- Nodemailer,socket.io,firebase

Future Scope

- **Mobile App Development** – Native iOS/Android apps for on-the-go access
- **Blockchain Audit Logs** – Tamper-proof, transparent activity tracking
- **Health Analytics Dashboards** – Visual insights for patients and doctors
- **INSURANCE CLAIM** - Would allow patients to securely share medical records with insurers, streamlining the claims process and reducing paperwork.
